Abstract

A strange mysterious relationship was found between fever and cancer – people who had a very high fever were like immuned against cancer for 5 years. This remained unexplained for at least 20 years. I am explaining it now with the finding of Russian scientists that cancer is caused by the formation of crystals (with the shape of stacked coins) between the cells. This disconnects the cells and they start to multiply fast, just like they do in a cut wound to heal the wound fast. However, when in a wound the new cells are guided by the current of regrowth (that start at the cut) where to go, in the case of cancer there is nothing to guide the new cells where to go and they multiply senselessly, which is called malignancy. This article: 1/ explains the mysterious relationship cancer-fever - the high fever melts the crystals between the cells and restores the normal communication between the cells; 2/ offers to use IR lasers with nonlinear beams (because the field between the cells is nonlinear field (NEMF)) to do what the fever does – melt the crystals in the extracellular space.

Keywords: Cancer; Explaining How Stress Causes Cancer; Congested Lymph System Also Causes Cancer; Fever Prevent Cancer; Explaining How Fever Prevent Cancer; Cure Of Cancer With Ir Laser.

1. Introduction

Russian scientists found that when the electromagnetic field between the cells decreases 10 times, crystals like stacked coins are formed between the cells [1]. This disconnects the cells and they start to multiply fast, just like they do in a cut wound to heal the wound fast. However, when in a cut wound there is a current of regrowth (that starts at the cut) to guide the new cells where to go, in the case of cancer there is nothing to guide the new cells where to go and they multiply senselessly, which is called malignancy [2].

2. How Does Stress (Negative Emotions) Cause Cancer?

Everybody knows that stress (negative emotions) causes cancer, but how stress causes cancer remains unknown because emotions were left out of our science and medicine. However, the fact that identical twins with the same DNA are totally different emotional personalities means that beside the DNA of the material body, there must be something else which makes the identical twins emotionally different. I photographed the aura with Kirlian photography for many

years. (Kirlian photography multiplies the photons of the weak aura to make the weak aura photographable). I found that the aura is brighter at positive emotions and dimmer at negative emotions. Since when we experience positive emotions and the aura is brighter, we say we are in high Spirit, and when we experience negative emotions and the aura is dimmer, we say we are in low Spirit – I concluded that the aura must be our Spirit, which makes us emotional [3].

“Aura” means “light” in Hebrew, but the aura light is different from the light we see with our eyes – it is a laser type of light [3]. The Russian scientist Shkatov developed equipment, which allowed him to measure the spinning of the aura. He found that positive emotions make the aura spin clockwise, while negative emotions make the aura spin counterclockwise. Nonlinear physics teaches that: 1/ vortices spin clockwise and suck energy in, which explains why positive emotions make the aura brighter; 2/ antivortices spin counterclockwise and emit energy, which explains why negative emotions make the aura dimmer [3].

However, to become brighter at positive emotions the aura needs to suck energy from somewhere. Since I found that the aura is weak nonlinear electromagnetic field (NEMF), there should be a source of NEMF-energy available, from which the aura sucks energy at positive emotions. I call this source of energy - Space Matrix NEMF. Since nonlinear fields (NEMFs) do not dissipate and can imprint information [4],[5], NEMF is the perfect media to create a Universe. The Creator first created the non-dissipating Space Matrix NEMF, then imprinted on it the holographic image of the Universe to be, and the Universe was created.

First, fast-spinning Black Holes (BHs) were created by scooping with rotational movement the Space Matrix NEMF. The created fast spinning BHs with hyperboloid shape (Fig. 1) were sucking the weak Space Matrix NEMF from one end of their hyperboloid, with their fast spinning increasing the weak Space Matrix NEMF 1,000 times, and from the other end of the hyperboloid spitting material plasma balls (stars) with $NEMF_m = 1,000 \times NEMF_{\text{Space Matrix}}$. The stars gave birth of the planets orbiting them [6].

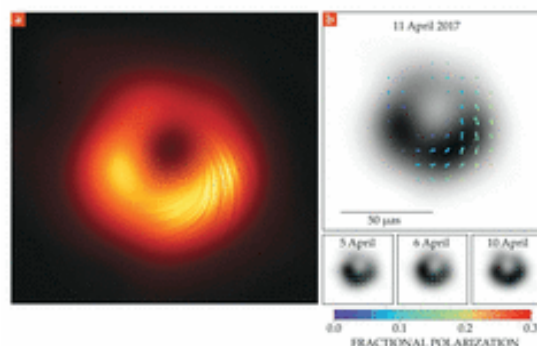

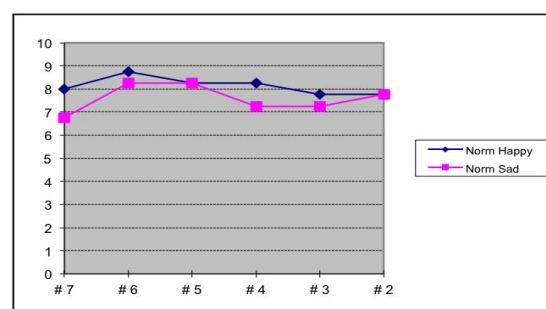

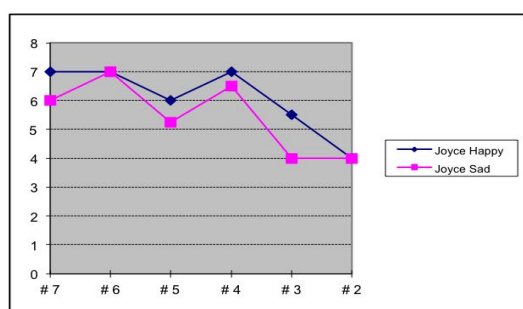

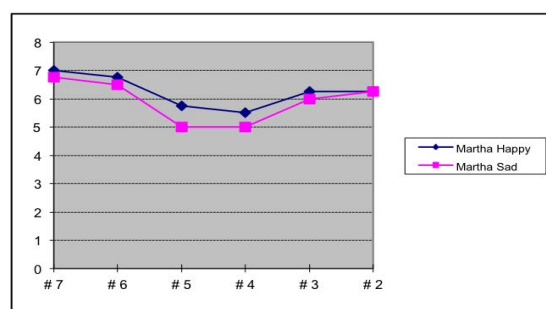

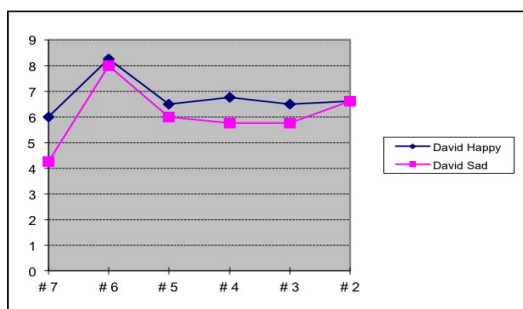

Figure 1: Photo with polarized light of swirling Black Hole

The planets were populated by living beings, who were material bodies (with their $NEMF_m$) and Spirits (seen as aura, with their $NEMF_s$), where $NEMF_s$ is the weak Space Matrix NEMF with imprinted information what type of emotional personalities the individuals are going to be. Since the Spirit $NEMF_s$ is very weak field - 1,000 times weaker than the $NEMF_m$ of the material body - I had to create a very sensitive equipment to be able to measure it. My measurements are presented on Figure 2.

One can see on Figure 2 that: 1/ positive emotions (or just positive thinking) is increasing the human energy

and making it more balanced (which means that positive emotions or just positive thinking makes us healthier); 2/ negative emotions (or just negative thinking) is making the human energy more unbalanced because the genetically-inherited weak organ drops in energy maximum - with time negative emotions will make this organ to malfunction or suffer a disease. Will this organ develop chronic disease or cancer depends on genetic predisposition: a/ if the energy between the cells is genetically-inherited low - cancer will develop; b/ if the energy of the cells is genetically-inherited low - chronic disease will develop.

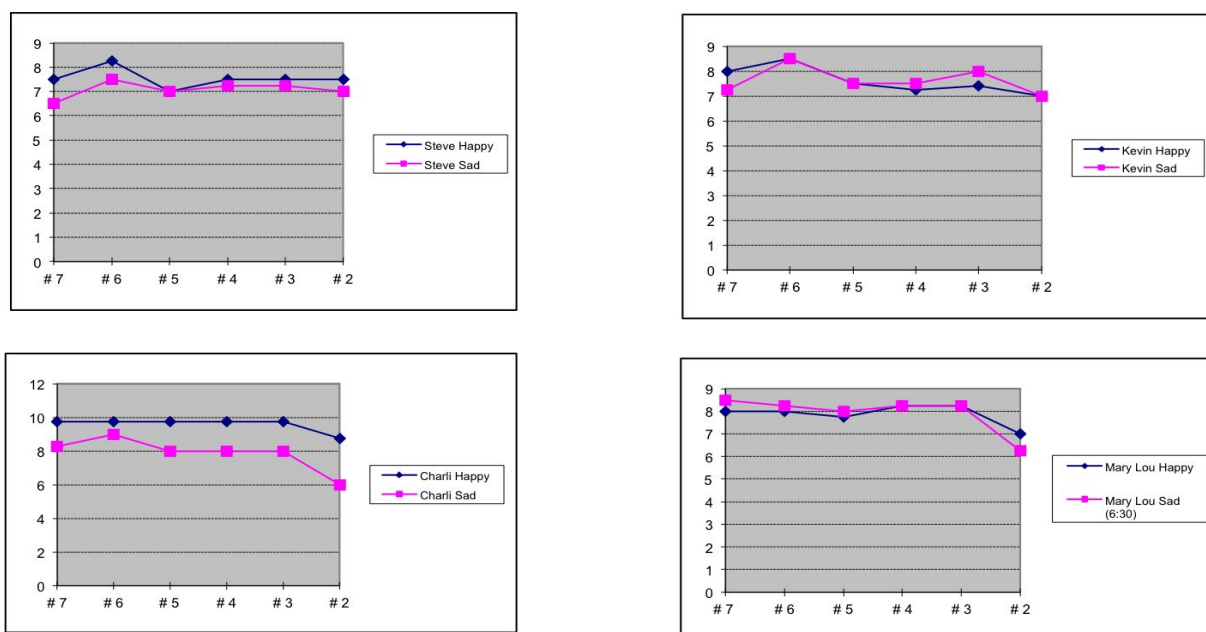

Figure 2: The upper curves are the energy balance at positive emotions or just positive thinking, the lower curves are the energy balance at negative emotions or just negative thinking.

3. New Ways of Cancer Cure by Restoring the Field between the Cells

Russian scientists found that malignancy starts when the field between the cells decreases 10 times [1]. My measurement showed that negative emotions (stress) decrease the energy. And when genetic predisposition to cancer is present, the energy between the cells is lower, and negative emotions (stress) by lowering it farther will lead to cancer. This opens a new door for cancer cure. The malignancy could be stopped by using external electromagnetic field, which will provide the field gobbled by the stress. In the past, electromagnetic field has been successfully used in Belorussia (and other countries) to stop the cancer spreading, but it was abandoned because of lack of understanding how it works [1]. The cancer-reducing effect will be maximal if the used electromagnetic field is nonlinear (NEMF).

4. People Who Had High Fever Are Like Immuned Against Cancer for 5 Years

People who had high fever in the last 5 years are like immunized against cancer. Now, after the Russian scientist found that cancer is caused by crystal formations in the space between the cells with the shape of stacked coins, the strange mysterious relationship between fever and cancer can be explained. The high fever melted the crystals in the space between the cells and restored their normal communication of the cells.

5. Possible Cancer Cure by Melting the Crystals between the Cells

This article not only explains the mysterious relationship cancer-fever - the high fever prevent cancer by melting the crystals between the cells and restoring the normal

communication between the cells. The article offers to use the newest quantum technology – IR lasers with nonlinear beams [5] (because the field between the cells is weak nonlinear field (NEMF)[4]) to heat the tissue and do what the fever does – to melt the crystal formations in the extracellular space and cure existing cancer or prevent cancer [5].

6. The Role of the Lymph System, which Supply the Liquid between the Cells

However, crystals could be formed in the space between the cells not only when the fields between the cells drops ten times. Crystals between the cells could also be formed when the lymph system (which provides the liquid between the cells) become too thick (congested). The thick lymph liquid could crystallize and the result would be the same – malignancy. This opens another door for successful cancer treatment and cancer prevention – flushing the lymph system with appropriate food diet [7] and exercising because the only way to make the lymph liquid to move is to exercise [8].

While the blood system has the heart to pump the blood, which provides nourishment to the cells, there is nothing to move the lymph liquid of the lymph system, which provides the liquid between the cells. The only way to make the lymph liquid to move is to exercise. Unfortunately, all our technologies make us to move less and less. This and the increased stress of life explains the dramatically increased number of cancer patients in the last few decades.

7. The Parasites and the Lymph System

Another factor that deserves attention is the connection parasites - lymph system. A simple way to test if you have parasites is to spit in water. If your saliva does not dissipate

(stay the same), you have parasites [8], [9]. This is because the parasites dump their exhaust into the lymph system and the more parasites you have, the thicker your lymph liquid becomes. And thicker lymph liquid means higher chances for crystallization of this thick liquid in the extracellular space, which would disconnect the cells and leads to malignancy (cancer).

If cancer dominates in advance age, it is because when the body is young and the immune system strong, it keeps the parasites under control. In advanced age, when the immune system becomes weaker, the parasites take over. They turn the immune system against itself not to bother them, which leads to diseases called autoimmune diseases. Presently 80 autoimmune diseases are known [8]. However, their real number is much bigger than 80 because Alzheimer, cancer, arthritis, diabetes, etc. are autoimmune diseases [2], and they are not counted as such in the number 80.

A good way to prevent cancer (and all autoimmune diseases) is to get rid of the parasites. And since the parasites are everywhere around us, parasite cleansing needs to be done every year or every other year. A guidance how to do this, can be found in my book: "Delicious Herbal and Folk Remedies" [9] in its last chapter "Flushing the Body Clean".

8. Periodic Cleansing of the Parasites and Flushing the Lymph System Would Prevent Cancer

Thus, Russian studies found that cancer results from formation of crystals in the extracellular space, which disconnect the cells and they start to multiply senselessly as they do in a cut wound. But while in cut wound there is a current of regrowth that start at the cut to guide the new cells where to go, in a cancerous tissue there is nothing to guide the new cells where to go and they multiply senselessly, which is called malignancy. Since the liquid between the cells is supplied by the lymph system, in which the parasites dump their exhaust, essential for preventing cancer is to cleanse the parasites periodically.

The next most important thing to do to prevent cancer is to flush the lymph system periodically with appropriate diet because when the lymph liquid becomes too thick, it crystalizes, which leads to cancer. In my articles [8] and [10], I listed the food that flushes the lymph system, which provides the liquid in the extracellular space. Thus, flushing the lymph system with appropriate food and periodic cleansing the

parasites (which dump their exhaust into the lymph system) are essential for preventing cancer.

9. Conclusion

This article not only explained the mysterious fact that high fever makes the person immunized against cancer for 5 years, it also explained the nature of cancer. According to Russian studies, cancer is caused by the formation of crystals in the extracellular space, which disconnects the cells and they start to multiply senselessly. Based on the positive effect of fever on cancer, the article offered to use the latest Quantum Technology (IR lasers with nonlinear beams (NEMF) to melt the crystals in the extracellular space and prevent or cure existing cancer. The article also offers periodic flushing of the lymph system (with appropriate diet) and periodic cleansing of the parasites to avoid the formation of crystals in the extracellular space and prevent cancer.
